

**Inner Join**  
inner\_join()

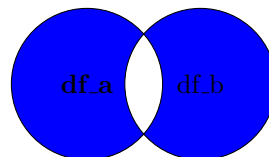

inner\_join(df\_a, df\_b, by = "id")

**Full Join**  
full\_join()

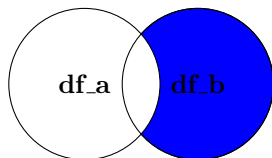

full\_join(df\_a, df\_b, by = "id")

**Outer Join**  
NA

NA

**Right Outer Join**  
anti\_join() (reverse)

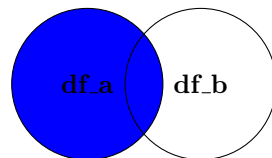

anti\_join(df\_b, df\_a, by = "id")

## Merging Two Datasets

dplyr-syntax

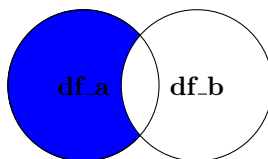

for two data-frames: df\_a, df\_b

**Left Join**  
left\_join()

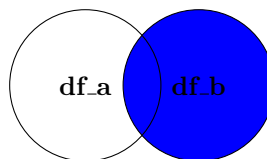

left\_join(df\_a, df\_b, by = "id")

**Left Outer Join**  
anti\_join()

anti\_join(df\_a, df\_b, by = "id")

**Right Join**  
right\_join()

right\_join(df\_a, df\_b, by = "id")
